

IOM UK Council Jan 2022 – Dec 2024

Congratulations to the following IOM UK Members were elected to lead IOM UK by forming the new council. They will take up their role on 1st January 2022 for 3 years

Jon Anslow

I have worked hard to make your voice heard across the world. We now have professional recognition for your skills, transferable to new employers who now know what they are asking for and getting. Having improved things for individual members we have also worked hard on behalf of our service providers, so they have access to an expanded market across the world that they are exploiting. Our footprint in the standards world has expanded and we are right at the front of that including for the first time giving advice to the DOD on their obsolescence standards.

I say “we” in my statement as your whole board have worked hard for you and deserve your support as well, there’s still room to improve that situation and if you give me your support for another session I will try and keep doing that.

Company: Leonardo
Job Title: Obsolescence
Manager

Stuart Broadbent

I have represented Alstom in IOM/COG UK since 2012, and I have been on the IOM UK Chapter Council since 2017, and as Vice Chair since 2019. I have worked closely with Ian Blackman to market IOM at UK and International level, including new digital initiatives such as the IOM YouTube channel and Wiki page, and to develop the remote seminar and meeting programme that IOM UK ran successfully during COVID19.

In the next two years, IOM has the challenge of running its first international conference outside the UK, and the attracting new individual and corporate members from new industries. I believe that with my international role with Alstom, I am well placed to help IOM to develop and to build on the marketing work that has been done since 2017.

Company: Alstom
Job Title: Obsolescence
Director

Ben Carter

Ben Carter has worked in the Aerospace/Defence sector for 24 Years at General Dynamics United Kingdom Limited.

Working to component level as Head of Obsolescence Management Ben is responsible for ensuring vital information in this field is available to all. In addition he is responsible for the management of the Counterfeit Avoidance Team and its various processes within the company.

Prior to working at General Dynamics Ben had his own company covering many facets within the electronics field. This primarily involved a wide and varied service of design and support within both the Hi fi Audio and Industrial Computerised Machinery Control & Monitoring systems.

Ben has been a member of IOM, formally COG, for over 20 years, and is keen to see members get the full value and benefits of IOM membership. He also wants to improve the website and facilities available to members plus Ben also wants to promote member communication and collaboration.

Company: General Dynamics
Job Title: Head of
Obsolescence Management

Graham Goring

Graham Goring has been involved in Components Standards since he graduated from City, University of London in 1980. He worked as a Quality Engineer with Analog Devices Ltd becoming a Member of the Chartered Quality Institute. In 1984 he joined Racal Defence and moved into the Group Standards Department in 1988. Later he was responsible for the re-structuring of the Racal Group Components Database adding obsolescence information. Graham worked for Thales Avionics for 12 years before moving to his role as Standards Consultant in 2008 for Thales UK HQ. He retired from Thales in 2015 continuing as an international standards consultant for the aerospace, defence and high-performance industries.

Graham continues to participate in National and International Standards development on several committees on several obsolescence, anti-counterfeit and technological related subjects. See www.e-Standards.co.uk/committees for an explanation of the current national and international standards, committees' membership and roles.

As Head of Standards and Accreditation for IIOM, Graham is assessing for best practices for all industries and standards on Obsolescence Management creating a Conformity and Capability Assessment Scheme for IIOM worldwide.

Company: E-standards
Job Title: Standards Consultant and Lead Assessor

Chris Green

I have been working in the field of obsolescence management for over 16 years. Working with clients to either head-off or resolve obsolescence when it happens. Throughout this time I have been involved with COG and now IIOM, indeed I sat on the COG steering committee for a number of years.

Because of the nature of the role's that I've held, I am lucky to see and understand all aspects of obsolescence from the end-user, through the OEM, down the supply chain to the component manufacturer. I'm confident that this level of knowledge and understanding would be an asset to the organisation where I hope to have a positive impact in whatever I'm asked to do. I also believe that CMCA(UK)'s transformation from defence work into supporting new industries, puts me in an ideal position to bring my experience to an organisation that is also heading in the same direction.

Company: CMCA (UK)
Job Title: Director

Daniel Grundy

After nearly a decade as an Automotive Engineer witnessing the daily effects of obsolescence on New Product Introduction and in-service design changes for German electronics giants Continental and Siemens, I moved into the Aerospace Supply Chain management and Obsolescence.

As an Obsolescence practitioner, with Rolls-Royce, Safran Electrical and Power and Siemens Energy, I have both witnessed and been impacted by many of the challenges we all face - Obsolescence, Counterfeit Avoidance, REACH and further increasing legislation.

Having been part of COG/IIOM for ten years; the past three of which I've had the privilege to serve on the UK Council. During this time, I have presented at Members Meetings, International Conferences and overseen the financial aspects of the organisation as we transitioned from a trade organisation to a fully established chapter of an International Institute. There is an increasing global trend for product lifecycle management, a consumer desire to repair and aid sustainability. IIOM are in a prime position to be able to assist and maintain their status as the foremost authority on the subject.

Company: Siemens Energy
Job Title: Supply Chain Obsolescence Programme Lead

Phil Wardle

Phil Wardle has 40 years' experience as an engineer and manager. He works as an independent consultant, is a Recognised Teacher at Cranfield University, and volunteers as a Professional Registration Advisor with the IET.

He has been a member of the IOM UK Council since 2015 and a non-executive member of the IOM International Board since 2018. He has developed IOM policies and processes for professional membership at Associate, Member and Fellow grades including the AIOM Short Course which is will have been delivered to over 200 students by the end of 2021.

If elected, Phil will continue to work on the development of the Professional Development offering to members through relationships he has established with the UK Engineering Council, Institution of Engineering & Technology, and Foundation for Science & Technology.

He has a BSc(Hons) and MSc in Computer Science and his affiliations include CEng, CIP, FIET, FBCS, and FRSA. his affiliations include CEng, CIP, FIET, FBCS, and FRSA.

Job Title: Director

Teri-Ann Winslow

Winslow Adaptics has been an active member since the year 2002 and I was Chairperson of COG in 2004-2005.

In recent years the establishment of professional qualifications and overseas chapters have been laudable aims for the institute, but we must not forget the strengths of the local networking between engineers and solution providers that occur at meetings and in between them, solving real problems.

I believe that IOM needs the broadest membership from the component supplier right through the supply chain to the end user to fully represent the discipline. Perhaps this relationship is not as strong as it once was, and it is important to recognise the sponsorship and promotional opportunities that the Solution provider community bring to the organisation.

My aim is to represent the solution providers that have not been represented in the last council and bring my commercial skills to benefit the organisation.

Company: Winslow Adaptics
Job Title: CEO
